Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

This is in response to Applicants' Preliminary amendment filed July 14, 2003.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 13-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Edgerly, Jr. et al 3,609,451.

Edgerly, Jr. et al disclose a lighting control system comprising: a light source (11) disposed in optical proximity to the room or area (13) for illuminating the area with a supplied light of a certain intensity in response to a light control signal; an illumination sensor (12) disposed in optical proximity to the area for detecting the total illumination resulting from both the supplied light and the ambient light (16), the sensor producing an illumination signal proportional to the total illumination; and a light controller (25, 26, 22, 20, 19, 30) electrically connected to the sensor and the light source, with a negative

feedback circuit (Fig. 2) for producing the light control signal in response to the illumination signal so as to maintain the predetermined illumination on the area, specified by a manually adjustable control device or specifying means (14, 41). The control device is capable for programming (setting) and electrically connected to the light controller. The system includes a housing as shown in Fig. 1. The system of Edgerly, Jr. inherently performs the claimed method steps.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

I) Yerbury et al 5,134,277 disclose a remote data transfer system having ambient light insensitive circuitry.
